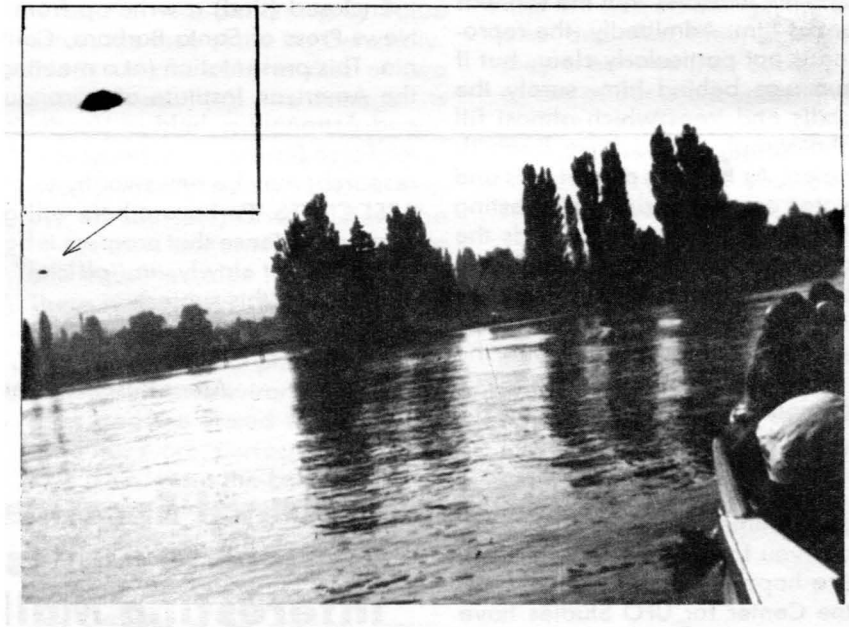
COPYRIGHT 1982 CENTER FOR UFO STUDIES APRIL 1982 — VOLUME 3 NUMBER 2

Möglicher UFO Ist Über Dem Rhein Photographieren



On the 28th of November, 1981, Eligio Macchini sat down at his typewriter and began a letter to Dr. Hynek to tell him (in German) of his accidental photograph of a strange dark image which appeared in a picture taken several years ago. He decided to write the letter and send the photograph when he found the address of the Center for UFO Studies in a book he had just read. It was his hope that someone might be able to identify the dark image he had not seen when the photograph was taken.

This scenario is a common one for UFO sighting report researchers. All organizations have received such correspondence and photographs and the explanation in almost all instances is either a lens flare (see correspondence section), a piece of dirt in the lens system or on the film, a kink in the negative emulsion base, an out-of-focus bird or a piece of debris thrown into the air by an unseen person. Only rarely does the photograph remain unidentified after applying the above possibilities. This may be one of those rare cases.

With the obvious necessary disclaimer that we have no proof other than what is presented here and additional examination may identify the image, we must admit at this point that it remains unknown and, possibly, a domed discoid object at a distance.

The circumstances of the photograph are as follows. Mr. Macchini was traveling on a river excursion boat on the Rhein river at a location not indicated in correspondence to-date. It was during the summer of 1978, he believes, and he was near the rail of the boat taking a picture of the island in the distance. Other passengers are visible at the right of the photograph, but none of them happen to be looking in the direction of the image in question. No one seems to be paying attention to it.

Sometime later, when the film was returned from development and printing, he noticed the dark spot and wondered what it was. Several years later, it reaches our office. We wrote for the original negative and the photographs appearing with this article were produced from it.

The negative was examined under high magnification by Mr. Fred Beckman, photoanalyst for CUFOS, and by Dr. Hynek, who find that the "object" is not the result of an emulsion defect or flaw or a processing mark. It thus appears "very likely" that the image, though small, is that of an actual object in space, even though the photographer was not aware of its presence while taking the photograph.

This exception to the normal explanation for "unseen" images is a refreshing contract to some UFO photography from Switzerland which we have seen in the past several years. We believe that the Swiss have seen true unknown objects for many years in their skies, as reported by our friends in the Groupement Ufologique Bullois and others.

The photograph is not level because that is the way it was taken by Mr. Macchini. The insert is an enlargement of the "object."

We looked for a reflection of the object in the water, but do not find it. Surface turbulence may have destroyed the reflection that might otherwise appear. There is surface turbulence visible.

ASSOCIATES reading this article are invited to share their ideas with us about other explanations we may have overlooked. A/N

Correspondence...

Mr. Timmerman,

As professional photographers, we were interested to read the report in the CUFOS ASSOCIATE NEWSLETTER, Vol. 3, No. 1, describing the 'UFO' photographed over Nahuel Huapi Lake in Argentina by Dr. Tarda. He remembers that the sun was behind him when he took the photograph, but examination of the reproduction in the NEWSLETTER indicates that the sun was in front of him. Admittedly, the reproduction is not particularly clear, but if the sun was behind him, surely the dark hills and trees which almost fill the photograph would have been illuminated. As it is, the distant hills and the water are both bright, suggesting that the sun was shining towards the photographer, and therefore probably into his camera lens. This is, of course, the ideal position for obtaining lens flare, and this seems to us to be the most likely explanation for this 'UFO' photograph.

Janet & Colin Bord

Dear Mr. Timmerman:

Thank you for writing to DISCOVER.

We're happy to find that DISCOVER and the Center for UFO Studies have found common ground in our enthusiasm for the SETI project. The idea of financing the studies privately is a good one, but perhaps idealistic.

You'll forgive us if we cast a skeptical eye at the UFO reports you mention; as you know, we're still waiting to be convinced. But we do thank you most sincerely for your kind comments about the article. All of us with an interest in the future must work together to pull out of the Proxmire quagmire.

Sincerely,
Kelly Knauer
For the Editors

Dear John,

Enclosed (find) a write-up from the News-Press of Santa Barbara, California. This presentation (at a meeting of the American Institute of Aeronautics and Astronautics held at Vandenberg Air Force Base . . . on the topic of UFO research) may be newsworthy to other ASSOCIATES. Perhaps others will gain some confidence that progress is being made, albeit slowly, in "official" acceptance of this subject.

Richard F. Haines
Research Scientist,
Ames Research Center

National Enquirer Article Prompts Interesting Mail To NICAP & APRO

A short article by John Blosser in the March 23rd issue of the newsweekly *NATIONAL ENQUIRER* has generated a surge of response by mail and telephone from all over the country to Aerial Phenomena Research Organization (3910 E. Kleindale Road, Tucson, AZ 85712) and National Investigations Committee on Aerial Phenomena (P.O. Box 607, Lima, OH 45802). NICAP reports 48 letters in the first 4 days.

Officers of both organizations report that shortly after the article appeared on newsstands mail began to arrive from persons who believe they may have had a UFO encounter and didn't realize it.

The article carried the heading MANY HAVE HAD A UFO ENCOUNTER — AND DON'T KNOW IT, suggesting that persons with certain symptoms should consider hypnosis to "help uncover it."

Triangular UFO April 16, 1981 At Grantham, N.H.

CUFOS has recently received permission to publish details of an interesting sighting report which occurred just one year ago near Grantham, New Hampshire. We quote from a letter received from Eugene A. Fucci, Assistant Director, Kiewit Computation Center, Dartmouth College, Hanover, New Hampshire. Mr. Fucci has a broad background in chemistry, electrical engineering, space systems and computers and, among other positions, served as Field Test Force Director for the MIDAS Satellite System. He should be regarded as a well-qualified observer. He writes as follows:

"Attached are two articles that appeared in the local newspaper, the VALLEY NEWS of White River Junction, VT.

"I reproduced a portion of the sectional air chart locating the sighting at approximately 72°07'W, 43°30'N at 21:30 EST or 02:30 Z, 16 April 1981.

"Repeating, it was a huge triangular metal machine. For your records, on that night to my left while driving southeast on I-89, NH, I saw two very bright stars which I at first assumed to be planets. One star appeared to be fixed while the second star descended from a very high altitude to just above the horizon. Shortly thereafter, a huge triangular-shaped vehicle with considerable colored lighting on the underside and a high intensity bright white light on the leading apex flew over my car. I had a clear and perfect view of a vehicle at least the size of about five B-52's (a B-52 is about ½ of a football field or 50 yards in length) with lights clearly outlining the triangular shape at approximately 2,000 feet (altitude), moving at less than 200 mph or normal traffic altitude speed for large aircraft. It was or appeared to be all metal and black in color.

"Unfortunately, I did not notice what happened to the other "star" nor did I observe the vehicle after it passed on a direct course to Windsor, Vermont, where it was again seen.

Dr. Tarda 1968 Photograph Judged Lens Flare by GSW

The day following the printing of the February 1982 ASSOCIATE NEWSLETTER which featured a photograph forwarded by SUFOI (Scandanavian UFO Information) taken by Dr. S.J. Tarda in southern Argentina at the end of December 1968, additional important information, which should have been considered prior to publication, was found.

Because it contributes significant evaluation detail to the case, we present it here as an important follow-up for our ASSOCIATES. It was distributed by the staff of Ground Saucer Watch located in Phoenix, Arizona in late 1979 and is produced here by personal permission of GSW Director William H. Spaulding.

"Dr. Tarda Photographic Case (8/9/79) Computer Photographic Analysis (critique)."

"A lone, color photograph (slide) was submitted to GSW for analysis by Robert Pratt. The photo, taken in the daylight mode, reveals both foreground and background data points. Also appearing in the frame, off the center line, is an inarticulate, yet brilliant unidentified image (UI). The sighting data stated that the photographer along with cursory witnesses, did not observe the image.

"The film was submitted to both conventional interpretation methods and computer enhancement techniques for analysis. The following modes of computer imagery were used: digitizing, digital densitometry, edge enhancement, color density slicing and filtering for resolution.

"The analysis revealed the following important points:

1. The image is extremely brilliant, containing densitometry values greater than all other points on the photograph.
2. The UI is not caused by any type of processing artifact or photographic equipment anomaly.
3. The UI does not have any natural shading or shadows, as compared to other features in the photograph.
4. The UI lacks symmetry and is unlike known bona-fide unidentified objects' shapes, aspect ratios, etc....
5. The sun is not to the back of the photographer in a literal sense, whereas, the sun's location calculated by the time of the year, the time of the day, a close scrutiny of other image shadows and densitometry, reveal the sun is approximately ten degrees from the zenith and on the right hand side *(FN) of the picture, creating a slight backward angle.
6. Density slicing (color contouring) reveals a near-uniform grey value across the face of the UI. Generally, this is attrributable to one of two possibilities, (1) the image is planar, i.e., one without substance, a two-dimensional object or (2) an evenly illuminated image, whereby, all source(s) of light from the image are uniform in distribution and equal in value.
7. There is absolutely **NO** evidence of a hoax or a fraudulent attempt to manufacture a UO photograph.
8. With the given environmental situations and the stated camera data, conditions are perfect to create a lens flare. Note the color of the UI, typical for a flare. Note also, the reflectance off of the lake and the sky portion on the right hand side of the picture due to reflectivity of the sun off the snow capped mountains. Since the right hand side is flooded with brilliant sun and reflective light, conditions are extremely high for a lense flare. Slight camera movement and re-location of the boat (movement-to-time) will change the camera's angle to the light and therefore cause previous and subsequent photos to be void of the lens anomaly.

CONCLUSIONS: Based on the analyzed data and dozens of similar photographic cases, it is the opinion of the GSW staff that the UI is a lens flare. There is no photographic data present to support a structured (real) image theory. As is the case in most analyses, there will be those who will argue that the image is a bonafide object. However, there is no photographic data to support this claim and in reality there is more data against it. Especially since no one saw the "object", the lighting conditions are superior for a flare, the lack of sequential frames revealing the image and the tenuous condition of the image." A/N

Quotes Worth Re-Quoting. . .

From a conversation between an editor of U.S. NEWS & WORLD REPORT and Stephen Jay Gould, a leading evolutionary biologist, teacher at Harvard University and author of "The Mismeasure of Man":

"People need to realize that scientists are human beings like everybody else and that their pronouncements may arise from their social prejudices, as any of our pronouncements might."

"The public should avoid being snowed by the scientist's line: 'Don't think about this for yourself, because it's all too complicated.'

"I wish scientists scrutinized more rigidly the sources of justification for their beliefs. If they did, they might realize that some of their findings do not derive from a direct investigation of nature but are rooted in assumptions growing out of experience and beliefs."

"I believe that there are correct answers to questions, and science, in its own bumbling, socially conditioned manner, stumbles toward those answers." A/N

UAPA Sponsors UFO Conference Near Cleveland

The 19th Annual National UFO Conference will hold its 1982 meeting on May 29th at the Parma Memorial Hall in Parma, Ohio, a suburb of Cleveland. It will consist of an afternoon session and an evening session for a combined advance registration of $6.00, available by writing to 3403 West 119th Street, Cleveland, OH 44111.

Featured speaker will be Gray Barker. Others on the program include Edward M. Biebel, Jr., Larry Blazey, Tom Benson, Robert Goerman and a translated paper by Werner Walter, a director of CENAP, of West Germany.

James W. Moseley will preside over the meeting of delegates attending the convention. The United Aerial Phenomena Agency, headquartered in Parma, is host organization for the event. A/N

Russian Study Of Ball Lightning Offers New Data

ASSOCIATE John Schuessler and member of the CUFOS Board of Scientific Advisors has forwarded to us an interesting abstract of a 1981 study by Grigor 'yev, A., Candidate of Physical-Mathematical Sciences at Yaroslavl' State University (located approximately 170 miles NNE of Moscow, Russia) entitled: NEW OBSERVATIONS REPORTED TO CENTER FOR INFORMATION ON BALL LIGHTNING. The primary source was "Krasnaya zvezda" May 29, 1981, No. 123 (17510), p. 4, cols. 2-4.

(ABSTRACT): The author comments on recent materials that have been received by the Center for the Collection and Processing of Information on Observations of Ball Lightning, which has been created in the school of Physics of the Yaroslavl' State University. Excerpts are given from two letters describing observations of ball lightning. One is an observation of what is apparently a rather rare form known as 'shaggy' ball lightning, and the other reports on an occurrence of the more widespread 'smooth' ball lightning. In the latter case, the ball is said to have descended along the trunk of a tree on the 'fiery thread,' and burst into three parts on impact with the ground; the observers were knocked off their feet by one of three 'beams' that also shot off from the impact. Commenting on these reports, the author says that specialists are at a loss to explain what the 'fiery thread' or the powerful beam may have been.

"The author goes on to report that in two years, the center has collected over 3,000 descriptions of ball lightning. By comparison, he says that only about a thousand descriptions have appeared in print in the last 150 years. Based on information that is deemed reliable, some established facts about ball lightning are that it can pass through glass, and that it can emit electromagnetic waves in the radio band. In addition to the numerous letters, two new photographs of ball lightning have been received. From one of them it was possible to estimate the average energy density by volume of the ball lightning. The density is said to be roughly that of conventional explosives such as nitroglycerine or TNT. Through isotope analysis of objects that come into contact with ball lightning, it is said that specialists have determined its capability to direct radiation.

"The author explains that perhaps the main reason for high interest in ball lightning, proceeding from the theory of acamedician P.L. Kapitsa that it is essentially a bundle of plasma, is the secrets it may hold for realizing controlled thermonuclear fusion. Observations of ball lightning indicate that the phenomenon lasts for tens and hundreds of seconds and, according to some data, even hours." A/N

Guest Editorial

Some U.S. government agencies, especially the F.B.I. and the C.I.A., insist that they have the right to decide what the other citizens of this nation should or should not know about the UFO phenomenon. Some have destroyed their files, hidden them, or refuse to release them in an apparent effort to prevent having government information on the UFO subject fall into the hands of other interested citizens. Many government agencies have used administrative delays, high "search" fees and excessive deletions as a means of discouraging UFOlogists from exercising their right of access under the Freedom of Information Act.

The Freedom of Information Act has helped to lift the curtain of secrecy surrounding government interest in UFOs. Utilizing the F.O.I.A. and our system of courts, UFOlogists have been able, through the Committee Against UFO Secrecy, to win the release of approximately 3,000 previously classified UFO-related documents from government files. We have suffered some defeats, however. The latest defeat was the government's own M.I.B. case, the eight men and one woman dressed in black sitting at the United States Supreme Court. In the case of C.A.U.S. versus the National Security Agency, we attempted to obtain 135 UFO-related documents which N.S.A. admitted having in their possession. With this latest decision by the Supreme Court not to hear the appeal, they are putting the American people on notice that the cloak of secrecy which surrounds the UFO phenomenon will remain in place.

The response of C.A.U.S. to this decision will be a continuing fight to bring the truth to the American people. However, we now have new evidence in this decision that, after more than thirty years of deceit and deception, the U.S. government continues to withhold UFO-related information from the public. We object to this policy of secrecy. We believe that the public has a right to know and the government has a duty to reveal what it knows about UFOS.

Lawrence Fawcett
Assistant Director
Citizens Against UFO Secrecy A/N

"For your records, I am a retired regular Air Force Lt. Col. (pilot). I graduated flying school in class 43-I on 1 October 1943 and was on flying status as a military pilot until my retirement in 1967. Since then, I owned a part of a Cherokee 140 and have remained active in flying, although I am no longer qualified owing to a physical disability. I am a most qualified observer, which I do believe is most important. I have attached a brief resume of my experiences.

"Good luck in your investigations."

Thank you very much, Mr. Fucci, for a very interesting report of your observerations one year ago this month. We hope that others of us will have a similar opportunity to see what you saw, whatever it was. A/N

1982 Rocky Mountain PRO UFOs Conference Set For June

R. Leo Sprinkle has announced preliminary details for the 3rd Annual Contactee Conference to be held Thursday through Saturday, June 17, 18, 19, 1982 at Laramie, Wyoming. The event will be co-sponsored by the Rocky Mountain Conference on UFO Investigation and the Paranormal Research Organization for UFO Studies.

The purpose of the conference is to provide a forum for persons who wish to discuss their UFO abduction/contacts/encounters, and an opportunity for interested investigators to become acquainted with their own UFO connection.

Registration is $15.00 for the sessions only or $50.00 including double occupancy hotel two nights plus some meals and all sessions.

The agenda will include both group discussions and public presentations. Funds are being sought to support the travel expenses of presenters. For further information, contact Mrs. Sally Noble, School of Extended Studies, University of Wyoming, Laramie, WY 82071 or call (307) 766-2149. A/N

Don't throw your copies of ASSOCIATE NEWSLETTER away. Send them to interested friends who may join you in supporting CUFOS.

Electromagnetic Propulsion Sans Ionization

ASSOCIATE Richard F. Haines and member of the CUFOS Board of Scientific Advisors has brought to our attention a technical paper entitled "Electromagnetic Propulsion Without Ionization" which was presented as Paper 80-1235 at the AIAA 16th Joint Propulsion Conference, Hartford, Connecticut, June/July 1980 (copyright 1981) by James E. Cox, currently employed as a Member of the Technical Staff at TRW Defense & Space Group, Redondo Beach, CA. The paper was published by the American Institute of Aeronautics and Astronautics in their Vol. 18, No. 5, Sept/Oct 1981 (pgs. 449-456).

The sketch shown here was taken from that article.

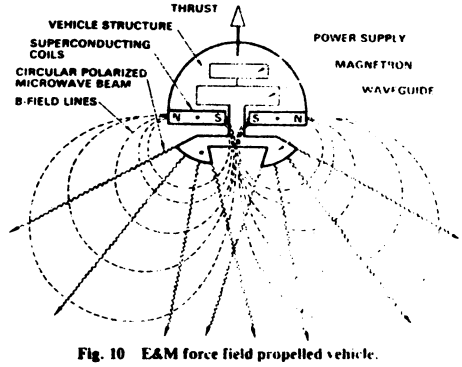

Fig. 10 E&M force field propelled vehicle.

"When an alternating electric field is applied to a polarized or polarizable material such as pure water, the dipole can be made to rotate at high frequency. If an alternating and synchronized magnetic field is then applied at right angles to the electric field, a Lorentz force is generated which propels the dielectric fluid without the necessity for ionization and the consequential energy losses. The thrust is proportional to the polarization, the frequency of dipole rotation, and the magnetic field strength. A gaseous propellant consisting of water or a colloid spray can achieve useful exit velocities at megacycle frequencies with power consumption diminished relative to conventional electromagnetic propulsion systems. Finally, the concept is applied to a shuttle propulsion system reacting against air and water vapor and found to show promise in launching payloads into Earth orbit and beyond."

It was thought that readers with technical background and interest in this subject would find this article by James E. Cox worth locating for further study. A/N

MUFON 1982 UFO SYMPOSIUM DETAILED

Walter H. Andrus, Director of Mutual UFO Network, Inc., has announced details of the Thirteenth Annual MUFON UFO Symposium. It will be held July 2, 3, and 4, 1982 at Loew's Westbury Hotel, 457 Yonge, Street, Toronto, Ontario M4Y 1X7, Canada and the United Friends of Ontario is the host organization, with Henry H. McKay, Canadian Regional MUFON Director, serving as Chairman for the event. The theme for this symposium is "UFOs — CANADA: A Global Perspective."

Featured speakers and their topics are as follows: Dr. J. Allen Hynek, Scientific Director of CUFOS, "Preparing For the Next UFO Flap"; Dr. George and Iris Owen, "Parapsychology As It Relates to UFOs"; David A. Haisell, "International Committee for UFO Research"; Arthur Bray, "Professionalism in Ufology"; Stanton T. Friedman, "Present Policy, Stated or Otherwise of Canadian Government Agencies on UFOs"; Michael A. Persinger, Ph.D., "Predicting UFO Events and Experiences"; and William L. Moore, tentative title "New Roswell Crash Disclosures."

Please notify us immediately your change in address. Thank YOU!

Specialized workshops will be interspersed between features speakers and videotaped films, including "Strange Harvest" about cattle mutilations and "UFOs Are Real," a documentary, will be shown on Saturday and Sunday. Registration begins Friday, July 2nd. Admission prices have not yet been established.

Group rates for hotel accommodations are available and should be requested when making reservations. For further information, write to United Friends of Ontario at P.O. Box 54, Agincourt, Ontario, M1S 3B4, Canada.

In addition to the weekend Symposium, a special all-day conference has been scheduled for Monday, July 5th for the purpose of conducting an open discussion of subjects which "will lead to greater cooperation of Ufology and the application of individual talent to help resolve the UFO phenomenon." Representatives of UFO study groups and organizations desiring to attend the July 5th "1982 UFO Summit Conference" should arrange their transportation and housing plans to include this additional day. Attendees are also being asked to notify Walter Andrus of their intention to attend, sending a list of those subjects they wish to have discussed.

CUFOS joins MUFON in hoping that old rivalries will be set aside by all attendees and that the newly-emerging spirit of cooperation among serious UFO research organizations in many countries will produce important progress toward the professionalism to which we all aspire in this important work.

A/N

Radio Public Service Announcement For April

Nine out of ten of the reports turned in to the CENTER FOR UFO STUDIES have been identified as honestly mistaken identifiable objects or phenomena such as bright planets, lenticular clouds, advertising blimps, experimental aircraft, bright meteors and street lamps. However, there remain a residual of sightings by very credible observers which defy explanation and in many cases are truly incredible sights. Because these have persisted throughout history and continue to appear unpredictably all over our planet, the non-profit CENTER FOR UFO STUDIES is collecting for its large computerized file and making available to qualified scientists for analysis as accurate information as can be gathered about these sightings. Center Scientific Director, Dr. J. Allen Hynek urges you to train yourself to properly identify what you see in the sky so that if, by chance, you someday experience an incredible sight you will be a more credible observer and will make an accurate report to the CENTER FOR UFO STUDIES, Box 1402, Evanston, Illinois, 60204.

Tape records of this and other PSAs of different lengths ready for broadcast are available by writing to: CUFOS, P.O. Box 1621, Lima, OH 45802.

A/N
